# Executive Summary

Purpose. The purpose of this project was to conduct a statewide needs assessment in order to determine the counties in the State of Kentucky in which a Drug Court program is needed and feasible. The assessment was conducted in two phases. Phase I of this project focused on countywide data collection and data analysis. Phase II focused on the feasibility of implementing a Drug Court program in the counties identified as being most in need of a Drug Court program and on more in-depth community resources and county demographic, economic, and social indicators.

Phase I. Data for each of 107 counties that did not already have a Drug Court program or were not currently planning a Drug Court program was collected. Data collected for each county included: Population estimates from the 1996 census data; Number of non-drug arrests; Percent of non-drug arrests by population; Number of drug arrests; Percent of drug arrests by population; Number of DUI closings; Average time to disposition for non-drug arrests; Average time to disposition for drug arrests; Average caseload of probation officers by district; Psychological and medical services; Vocational and educational services; and Social services.

Results of Phase I. Results of Phase I indicated that Barren, Christian, Henderson, Hopkins, Livingston, Marshall, McCracken, Nelson, Perry, Rockcastle, Russell, and Simpson counties were identified as having a higher number of drug arrests and a greater number of community psychological resources than the other counties. These 12 counties made up 11% of the total number of counties included in the analysis and were the focus of Phase II of the needs assessment.

Phase II. Phase II focused on the feasibility of implementing a Drug Court program in the counties identified in Phase I. In order to effect long lasting community change, it is essential that communities develop interventions that are uniquely tailored to the specific community and that interventions are implemented with community support. Communities are very different from each other. What is successful in one community may not be successful in other communities, in part because resources, strengths, challenges, and political climates vary from community to community. The Community Readiness Model is a method for assessing the level of readiness of a community to develop and implement a program, such as a Drug Court program. The conceptualization of the Community Readiness Model was used in Phase II of this study to help interpret survey responses.

Feasibility and community readiness was assessed by collecting more in-depth information regarding the county and the specific area in which the Circuit courthouse was located. Telephone interviews (n=121) were conducted with key community representatives including Judges (n=30); Law enforcement representatives, such as jailers, police, and probation and parole officers, (n=49); Defense attorney representatives (n=25); and Prosecuting attorney representatives (n=17) across all of the counties. Overall there was a 91% response rate between attempted survey contacts and completed survey contacts.

In addition to the survey, community resource information was obtained for each community for which Judges indicated a desire to conduct the feasibility study in their community (n=10 counties). The third part of the data collection included demographic, economic, and social information as well as adult and juvenile substance use estimates and arrest data.

Results of Phase II. Overall, out of the 12 counties identified in Phase I, there were two counties in which Judges indicated no interest in pursuing Phase II of the needs assessment at this time.

Christian, McCracken, and Rockcastle County representatives were supportive of having a Drug Court program in their communities and had adequate community resources necessary to support a Drug Court program. Christian and McCracken Counties both had relatively high juvenile arrests suggesting a juvenile Drug Court program may be valuable in these counties as well. Russell County representatives were also enthusiastic about having a Drug Court program in their community. However, community resources in Russell County were more limited. It is recommended that all four communities apply for a Drug Court planning grant to move into the next stage necessary for implementing a Drug Court program.

Barren and Perry County respondents were supportive of the concept of Drug Court program in their community, but not overwhelmingly cohesive in their support and other responses regarding a Drug Court program. These two counties had excellent community resources available that a Drug Court program could utilize. Livingston and Marshall County respondents were also supportive, however, representatives were not cohesive in support for a Drug Court Program. Community resources for these two communities were limited and juvenile substance use estimates were relatively high. All four communities could utilize further information about Drug Courts and key community leader meetings in order to move these communities toward a planning grant application.

Henderson and Hopkins County respondents were somewhat supportive of a Drug Court program, however, not cohesive in that support. Both Counties had adequate community resources. Both counties had relatively higher juvenile arrests and Hopkins County had relatively higher juvenile substance use rates indicating a juvenile Drug Court program may also benefit these communities.

In summary, of 107 counties, 12 were identified for further assessment. Of the 12 identified for further assessment four communities were ready to move toward an implementation of a Drug Court program by applying for a planning grant (Christian, McCracken, Rockcastle, and Russell). Four were close to being ready to applying for a planning grant, but need further information regarding Drug Court programs (Barren, Perry, Livingston, and Marshall). Two counties could utilize extensive information about a Drug Court program but had Judges that were supportive of the idea (Henderson and Hopkins). About half of the counties in each category had adequate community resources and half had more limited resources indicating that some of the counties may want to consider alternative treatment models. Three of the counties were very rural and had social indicators suggesting low education levels and few economic opportunities. Programs in these areas may need to be creative in meeting the needs of their clients. Several counties had indicators including higher juvenile substance use rates, higher juvenile arrests, more births to teen and very young mothers, and more adolescents in the community, which suggested a juvenile Drug Court program may benefit the community. Finally, two counties were not able to consider a Drug Court program at the time of this study (Nelson and Simpson).

### Phase I

#### Introduction

At the end of 1996, more than 1.7 million adults were incarcerated; this represents a three-fold increase in the number incarcerated from 15 years earlier<sup>1</sup>. Much of this growth in the prison and jail population is due to drug law violators<sup>2</sup>. The U.S. Department of Justice Bureau of Justice Statistics indicated that at least 77%-81% of inmates were drug and/or alcohol involved. For example, a recent report<sup>3</sup> indicated that the percentage of inmates incarcerated for violent crimes who were under the influence of alcohol alone was 21% for state prison inmates, 11% for federal prison inmates, and 26% for jail inmates. The percentage of inmates incarcerated for violent crimes under the influence of illegal drugs or illegal drugs plus alcohol was 28% for state inmates, 22% for federal inmates, and 25% for jail inmates. Thus, prisons and jails are housing many drug offenders.

Drug Courts evolved in response to the overlap between drug/alcohol abuse and crime with efforts directed toward engaging defendants in substance abuse treatment<sup>4</sup>. As of August 1999, 396 jurisdictions across the nation had implemented a Drug Court program<sup>5</sup>. The Drug Court is a court-managed drug intervention and treatment program designed to provide a cost-effective alternative to traditional criminal case processing<sup>6</sup>. Drug Courts are treatment-oriented and target clients whose major problems stem from substance abuse.

Kentucky is similar to the nation with respect to rising rates of incarcerated drug offenders. For example, 5,936 inmates were released in 1995 from adult institutions in Kentucky and 33.1% of them returned to prison within two years<sup>7</sup>. The overall recidivism rate increased from 30.8% in 1989 to 33.1% in 1995. Although recidivism is highest among violent offenders, the rate of recidivism for drug offenders is climbing rapidly. In addition, new drug felonies increased 214% from 1989 to 1998. Leukefeld et al.<sup>8</sup> found that 59% of Kentucky inmates were dependant on substances and that inmate illicit drug use 1 month prior to incarceration was 20 times higher than the general population. In response to the rising costs of incarceration and increased drug related arrests, Kentucky's Administrative Office of the Courts (AOC) established a Drug Court program in July 1996, which was the first AOC Drug Court program in the State. The mission of Kentucky's Drug Courts, like other Drug Courts, is to create a criminal justice environment that stops illicit drug use and related criminal activity and promotes recovery.

In addition to high rates of drug users involved in the criminal justice system, Kentucky has

the 7<sup>th</sup> highest percentage of rural population in the nation<sup>9</sup> and Kentucky has a total of 120 counties. At the time of this study, there were 13 counties in Kentucky with existing Drug Court programs or which had Drug Court planning grants, leaving 107 counties without a Drug Court program and without plans for a Drug Court program. However, there was a need to examine which of those 107 counties may benefit most from a Drug Court program. Thus, a needs assessment approach was used to target limited resources for communities with the most need for a Drug Court program. Specifically, the United Way of America<sup>10</sup> defines needs assessment as "…a systematic process of collection and analysis as inputs into resource allocation decisions with a view to discovering and identifying goods and services the community is lacking in relation to the generally accepted standards, and for which there exists some consensus as to the community's responsibility for their provision". McKillip<sup>11</sup> suggests that needs assessment is a process of ordering and prioritizing community needs and the role of a systematic analysis of need is the reduction of uncertainty.

The purpose of this project was two fold. The first was to conduct a statewide needs assessment in order to determine the counties in the State of Kentucky in which a Drug Court program was most needed (Phase I). The first purpose of this project meets both of the definitions of needs assessment above. However, the United Way definition suggests there is a second level of a needs assessment approach—"for which there exists some consensus as to the community's responsibility for their provision." The second part of that definition suggests that merely determining a need should not be the sole consideration in resource allocation. The community must be willing to accept responsibility in meeting that need. Thus, the second purpose of this project was to examine the feasibility of implementing a Drug Court program in the counties identified as being most in need of a Drug Court program (Phase II). The second phase of the project focused on community readiness assessment, resource assessment, and context.

#### Phase I Methodology

Phase I primarily focused on collecting information for each of the 107 (out of 120) counties across the state of Kentucky which did not already have a Drug Court program or in which a Drug Court program was not currently being planned.

The following information was collected for each of the 107 counties:

- Population estimates from the 1996 census data
- Number of non-drug arrests
- Percent of non-drug arrests by population
- Number of drug arrests
- Percent of drug arrests by population
- Number of DUI closings
- Average time to disposition for non-drug arrests
- Average time to disposition for drug arrests
- Average caseload of probation officers by district

All of the data, with the exception of the population estimates, was from Fiscal Year 1998. The Kentucky State Data Center provided the 1996 Census Data estimates. The criminal justice statistics were obtained from a variety of sources. The Administrative Office of the Courts provided: number of non-drug arrests per county, number of drug arrests per county, number of DUI closings, and average time to disposition for drug and non-drug cases by county. The Office of Probation and Parole provided the average caseload numbers of Probation and Parole officers in each supervisory district for Fiscal Year 1998. This office also provided a listing of counties in each supervisory district. Appendix D includes arrest data for Kentucky for 1997 by county complied by the Kentucky Justice Cabinet, Criminal Justice Council.

In addition to the criminal justice data collected by county, a preliminary overview of various community resources was collected for each county from three major categories—psychological/medical services, vocational/educational services, and social services including:
(1) Kentucky Mental Health and Mental Retardation Boards related substance abuse programs, (2) Kentucky Department of Vocational Rehabilitation, and
(3) Department of Social Services.

For each community resource agency listed by county, the following information was noted: the number of locations for each office and whether the agency provides basic resources such as food, clothing, shelter; education/employment; counseling—family and/or individual; drug and alcohol programs; and group therapy/support groups.

Information was obtained from the Kentucky Mental Health and Mental Retardation Board Regions' Kentucky Directory, which is still in draft form. This draft was last updated in January 1997. The Kentucky Department of Vocational Rehabilitation provided locations of the Vocational Rehabilitation offices for each county. These locations are current as of July 1998. The Kentucky Community Resource Directory was obtained from the Department of Corrections, Division of Probation. This directory was last compiled in 1992. A complete listing of resource agencies and contact information is provided in Appendix B.

After collecting the criminal justice and community resource information for each county, data analysis was conducted. First, percentages of non-drug arrests, drug arrests, and DUI arrests were computed based on population estimates. Then, frequencies were used to determine the counties that fell in to the 75<sup>th</sup> percentile or higher for each of the following measures: percentage of drug arrests, percentage of DUI arrests, times to disposition for drug charges, probation caseload, number of psychological resources, and number of other resources. Counties were then given a score of 1 to 6 depending on the number of times the specific county fell into the 75<sup>th</sup> percentile on any one of the six variables. A score of 1 indicated that that specific county fell into the 75<sup>th</sup> percentile six times. This score is recorded in the lower right hand corner of each specific county page.

Next, another list of counties was produced; only those that fell into the 75<sup>th</sup> percentile in both psychological resources and percentage of drug arrests were included in this list. The two lists were then compared: counties with a score of 4-6 from the first list and the counties that fell into the 75<sup>th</sup> percentile, on both the percent of drug arrests and psychological resources, were selected. The counties that were on both of these lists are the twelve counties in which the feasibility of a Drug Court program was studied. These 12 counties are 11% of the total number of counties included in the analysis.

#### **Phase I Results**

The 12 selected counties are profiled in the Table 1 with their population estimates, the percentage of drug arrests in the county, the percentage of DUI arrests in the county, the time to disposition for drug cases, the average caseload of probation officers in their district, the number of identified psychological/medical resources available in the county, and the number of identified vocational/educational and social services available in the county.

Table 1. Identified Counties

County	Population Estimate	Drug %	DUI%	Drug Disposition	Caseload	Psychological Resources	Other Resources
Barren	36,255	2.04	.90	3.46	70.50	6	9
Christian	65,445	1.83	1.45	2.90	92.42	4	6
Henderson	44,444	2.20	.92	2.38	91.70	3	5
Hopkins	46,545	1.89	.86	3.80	92.42	3	6
Livingston	9,290	2.00	1.08	2.54	88.20	2	4
Marshall	29,683	2.08	.75	1.78	88.20	2	4
McCracken	64,940	1.98	1.21	2.96	88.20	4	7
Nelson	34,332	1.75	1.48	5.35	75.08	2	5
Perry	31,199	2.31	1.36	2.64	56.00	3	7
Rockcastle	15,627	2.44	1.84	3.92	88.17	3	5
Russell	16,401	2.06	1.27	4.44	88.17	2	3
Simpson	16,084	1.63	1.08	5.48	92.42	2	3

Appendix C displays individual tables for each of the 107 counties including the county level data and the county score according to the procedure described above. The next section focuses on Phase II of the needs assessment project, which includes key community leader surveys, community resource assessment, and county demographic, economic, and social statistics as well as adult and juvenile substance use estimates and juvenile arrests.

# Phase II

#### Introduction

In order to effect long lasting community change, it is essential that communities develop interventions that are uniquely tailored to their specific community and that interventions are implemented with community support. Communities are very different from each other. What is successful in one community may be very different than what will be successful in other communities, in part, because resources, strengths, challenges, and political climates all vary from community to community. In addition, the community must be willing to accept responsibility in meeting a need in their community. Thus, the focus of Phase II of this project was on community readiness assessment in order to examine the feasibility of implementing a Drug Court program in the counties identified as being most in need of a Drug Court program in Phase I. The Community Readiness Model is a method for assessing the level of readiness of a community to develop and implement a program, like a Drug Court program (Donnermeyer et al., 1997; Oetting et al., 1995; Plested et al., 1998; Plested et al., 1999; Thurman et al., 1999).

The community readiness model identifies nine stages of readiness adapted from Plested et al. (1999).

- 1. <u>Apathy/Hopelessness</u>. The behavior, when occurring in a particular social context, is tolerated by key community leadership. "It's just the way things are." ("Leadership" can include anyone in the community who is appointed to a leadership position or is influential in community affairs, i.e., a Judge, police chief, an individual, a parent, a child, a teacher, a clergy person, etc.). There are no formal or informal policies in place in the community. Community climate may encourage the behavior although the behavior may be expected of one group and not another (i.e., by gender, race, social class, age, etc.).
- 2. <u>Denial</u>. There is usually some recognition by community leadership that the behavior itself is or can be a problem, but there may be little or no recognition that this might be a <u>local</u> problem. If there is some idea that it is a local problem, there is a feeling that nothing needs to be done about this locally. "It's not our problem." "We can't do anything about it." There may or may not be policies in place; if there are, they are ignored. Community climate tends to match the attitudes of leaders and may be passive, guarded or apathetic.
- 3. <u>Vague awareness</u>. There is a general feeling among community leaders that there is a local problem and that something should be done about it, but there is no immediate motivation to do anything. There may be stories or anecdotes about the problem, but ideas about why the problem occurs and who has the problem tend to be stereotyped and/or vague. Policies exist and are known to officials; however, they may be inconsistently followed. No identifiable leadership exists or leadership lacks energy, resources, or motivation for dealing with this problem. Community climate does not serve to motivate leaders.

- 4. <u>Preplanning</u>. There is clear recognition on the part of some leaders that there is a local problem and that something should be done about it. There are identifiable leaders, and there may even be a committee, but efforts are not focused or detailed. The policies are known and generally followed. There is discussion but no real planning of actions to address the problem. Community climate may or may not support leadership efforts to deal with the problem.
- 5. <u>Preparation</u>. Planning is going on and focuses on practical details. There is general information about local problems and about the pros and cons of prevention activities, actions or policies that are followed by officials, but it may not be based on formally collected data. Leadership is active and energetic. Decisions are being made about what will be done and who will do it. Resources (people, money, time, space, etc.) are being actively sought or have been committed. Community climate may or may not support these efforts.
- 6. <u>Initiation</u>. Enough information is available to justify prevention activities, actions or policies. An activity or action has been started and is underway, but it is still viewed as a new effort. Staff are in training or have just finished training. There may be great enthusiasm among the leaders because limitations and problems have not yet been experienced. Policies are known to be a subset of the community that are effected by the policies, i.e., offenders and victims. Community climate may or may not support these efforts.
- 7. <u>Stabilization</u>. One or two programs or activities are running, supported by administrators or community decision makers. Programs, activities or policies are viewed as permanent. Staff are usually trained and experienced. There is little perceived need for change or expansion. Policies are known to most community members. Limitations may be known, but there is no in-depth evaluation of effectiveness nor is there a sense that any recognized limitations suggest a need for change. There may or may not be some form of routine tracking of prevalence. There may be some criticism, but community climate generally supports what is occurring.
- 8. <u>Confirmation/Expansion</u>. There are standard programs, activities and policies in place and authorities or community decision makers support expanding or improving programs. Original efforts have been evaluated, modified, and new efforts are being planned or tried in order to reach more people, those more at risk, or different demographic groups. Resources for new efforts are being sought or committed. Policies are consistent and followed with new policies being implemented as needed. Data are regularly obtained on extent of local problems and efforts are made to assess risk factors and causes of the problem. Community climate may challenge specific programs and is fundamentally supportive, but all groups may not support every activity.
- 9. <u>Professionalization</u>. Detailed and sophisticated knowledge of prevalence, risk factors and causes of the problem exists. Some efforts may be aimed at general populations while others are targeted at specific risk factors and/or high-risk groups. Highly trained staff are running programs or activities, authorities are supportive, and community involvement is high. Effective evaluation is used to test and modify programs, policies or activities. Community climate should challenge specific programs, but is fundamentally supportive and supports continued evaluation, seeking improvement.

Stages five through nine are related to program initiation and do not apply to this needs assessment because all of the counties with Drug Court programs were automatically excluded from the overall analysis.

Stage one and two refer to those counties who were not interested in having a Drug Court. Stage three refers to counties that recognize that a program such as Drug Court would potentially be beneficial to their community. Finally, Stage four refers to counties interested in having a Drug Court. Thus, each county included in the feasibility assessment of this study received a score according to the following criteria and the Community Readiness Model:

Table 2. Community Readiness Rating Summary and Stage

RATING	RATING DESCRIPTION
1	Refused interview (Stage 1).
2	Completed interview, however there were disagreements among key community
	members about the Drug Court Program (Stage 2).
3	A high degree of enthusiasm, but key community members were not cohesive in their
	responses to strengths, barriers, and strategies for overcoming barriers (Stage 3).
4	A high degree of enthusiasm, cohesiveness among community members, similarity of
	ideas about overcoming barriers (Stage 4).

Phase II also took approximately four months to complete. In addition to the *community readiness* assessment, Phase II also examined *community resources* as well as county *demographic, economic, and social statistics* including adult and juvenile substance use estimates and juvenile arrests. The purpose of Phase II of this needs assessment approach was to examine community readiness, to examine the feasibility of implementing a Drug Court program, to examine the potential need for a juvenile Drug Court program, and to provide some contextual information about the community. Appendix A presents the survey results for each of the targeted counties.

#### Phase II Methodology

Community Readiness Methodology. Judges in each county identified in Phase I were sent letters from Lisa Minton, Administrative Office of the Courts Drug Courts Manager for the State of Kentucky. The letters indicated that a Statewide Needs Assessment was being conducted to examine the need for a Drug Court program in the state of Kentucky. The letters also stated that their county was identified in the top 11% (of the 107 counties included in the assessment) as a county that could incorporate a Drug Court. Judges were asked to contact Lisa Minton if they were interested in pursuing a feasibility study in their county. In addition, Judges were contacted by phone approximately two weeks after the letters were sent out to determine their interest in proceeding with the study.

If Judges in a specific county indicated they were interested, they were then interviewed by phone for approximately 15 minutes. The purpose of the interview was to examine their support for a Drug Court program in their county and any adjacent counties, potential barriers, and the overall feasibility of implementing a Drug Court program in their community. In addition, they were asked for contact information for representatives from:

- Prosecutors;
- Defense attorneys (preferably one public defender);
- Jail staff;
- Probation and parole officers; and,
- Police officers.

These representatives were surveyed with the purpose of determining the level of support that each of the representatives would be willing to give to a local Drug Court, potential barriers, and the overall feasibility of implementing a Drug Court program in their community. Specifically, surveys asked each representative about:

- Perceived strengths of a Drug Court program;
- Benefits to their office of having a Drug Court program;
- Perceived barriers to having a Drug Court program in their community; and,
- Ways or strategies suggested for overcoming those barriers.

Telephone interviews (n=121) were conducted with key community representatives including Judges (n=30); Law enforcement representatives (n=49); Defense attorney representatives (n=25); and Prosecuting attorney representatives (n=17) across all of the counties. Overall there was a 91% response rate between attempted survey contacts and completed survey contacts (see Table 3). Survey results were then used to classify the county into the community readiness stage. Each of the county results are presented in Appendix A. Community treatment provider information was collected as a critical component of the community resources. However, treatment providers were not surveyed within the scope of this project primarily because the Drug Court treatment component is typically a critical part of the individual Drug Court program planning process.

Table 3. Survey Contacts Attempted and Completed

	Judges		Law Enforcement		Defense		Prosecution		
County	Attempted	Obtained	Attempted	Obtained	Attempted	Obtained	Attempted	Obtained	Total Surveys Obtained By County
Barren	2	2	5	4	1	1	2	2	9
Christian	4	4	10	9	3	3	3	3	19

Community readiness ratings were assigned based on the degree of respondent cohesiveness and enthusiasm in the overall need for a Drug Court program in the specific county, the strengths, weaknesses, barriers, and strategies for overcoming the barriers in the county. Ratings were assigned by one team member and two other team members rated the counties independently. There were no disagreements among team members about the community readiness ratings. Results were examined both by county and across counties. Table 6 presents an overview and integration by county for several different categories including the community readiness ratings.

Community Resource Methodology. Community Resources were examined for the community in which the Circuit courthouse is located. The Circuit courthouse location was chosen as the main focus because the Judges initially contacted were Circuit Judges and would presumably hold Drug Court program sessions at that courthouse. The community resources included:

- The number and location (when possible) of AA/NA groups;
- The number, location and contact information for government services;
- The number, location and contact information for the Comprehensive Care Agency that serves that area;
- The number, location and contact information for private and individual mental health providers;
- The number, location and contact information for other community resources (e.g., YMCA, Salvation Army, Spouse Abuse Shelters); and,
- The travel distance from the Circuit courthouse to the local jail, health department, and Comprehensive Care Agency that serves that area.

The information was collected using: The Kentucky Community Resource Directory; The Kentucky Mental Health and Mental Retardation Board Regions' Kentucky Directory; Alcoholic Anonymous Office List of Meetings; Narcotics Anonymous Office List of Meetings; and the Yahoo Yellow Pages on the World Wide Web (see Appendix B for a more specific listing of resources utilized to collect community data).

Ratings were assigned to each county based on the number of community resources that were available (see Table 6). These included: (1) The number of AA or NA meetings available; (2) The distance to Comprehensive Care from the courthouse; (3) The number of private and individual substance abuse counseling services; and, (4) the number of other services available in the community (e.g., YMCA program, battered women's program). Counties with the greatest number of resources, and which had available and accessible substance abuse treatment (the Comprehensive Care facility was located close to the courthouse and/or other private and individual substance abuse counseling services were available) were given a higher rating than those with limited resources and a greater distance between the courthouse and Comprehensive Care. Specifically, ratings ranged from 0 to 2. A rating of 0 indicated that resources were limited and not easily accessible. A rating of 1 indicated there were adequate resources with some necessary resources available while other resources were more limited. A rating of 2 indicated resources were excellent, easily accessible and there were a number of resources available. The ratings for this category were assigned by two team members independently. There was agreement among the team members about the ratings.

*Demographic, Economic, and Social Statistics Methods.* This category focused on information about the county including:

- Population Estimate
- % Rural
- % Housing units without transportation
- % Housing units without telephones
- Median household income
- % Living below poverty
- Average % Unemployment rate
- % High school graduate or above
- % Adults receiving K-TAP (Kentucky Transitional Assistance Program) who are either employed or have a work history
- # Family Resource Youth Service Centers
- % Births to mothers less than 20 years old
- % Single parent households
- % Population 10-19
- % Population under 18 years old

In addition, for each county substance use estimates for adults and juveniles are provided along with the juvenile population and arrest data.

Data for county demographic, economic, and social statistics was obtained from: (1) 1990 Census Information from the Kentucky Legislative Research Commission; (2) Zimmerman & Sampson (1998) for socioeconomic estimates; (3) Kentucky State Police provided juvenile arrest data; and, (4) Watson, Gibson, & Leukefeld (1999) provided substance use estimates (see Appendix B for a complete list of references and data sources).

The adult substance use prevalence estimates were based on data from the 1995 Kentucky Household Survey. Since direct county-level estimates would have required a sample of unaffordable size, synthetic estimates for county-level measures were derived using a logistic regression model adapted from the method used in SAMHSA's Summary Report of the National Household Surveys on Drug Abuse<sup>12</sup>. Estimates of adolescent substance abuse were derived from the 1998 Adolescent Household Survey. The synthetic estimate methodology used for the adult substance use estimates was also used to derive the direct and synthetic estimates at the Kentucky Mental Health and Mental Retardation Regional level for juveniles. However, synthetic estimates at the Regional level were derived iterative proportional scaling rather than logistic regression. The approach for the county level estimates assumed the prevalence of the relevant sampling area and applied the regional rate to the county population of adolescents 12-17 years old.

Adult and juvenile substance use estimates and juvenile arrests were also given ratings. First, adult substance use was ranked from highest percentage to lowest (1-10) for each of the counties separately including: Past year alcohol use; Lifetime alcohol use; Past year marijuana use; and Lifetime marijuana use. These four rankings were then combined and averaged. The top two counties (20%) received a score of 2, which indicated relatively high adult substance use rates. Next, lifetime use of hallucinogens, cocaine/crack, and heroin and/or other opiates were ranked separately from highest to lowest (1-10) for each of the counties. Counties that ranked first in any of these substance use categories were also given a score of 2, which also indicated relatively higher substance use. All other counties received a score of 1 for this category.

Juvenile lifetime alcohol use and marijuana use were also separately ranked from highest percentage to lowest for each of the counties. These rankings were combined and averaged. The top three counties were automatically given a score of 2, which indicated relatively high substance use. Next, lifetime use estimates of hallucinogens, cocaine/ crack, and heroin and/or other opiates were ranked separately from highest percentage to lowest for each of the counties. Any county that was ranked first in any of substance use categories were also given a score of 2, which also indicated relatively higher substance use. All other counties received a score of 1 for this category.

Juvenile arrests were computed by categorizing counties where juvenile arrests were less than 5% of the juvenile population with a score of 0, and a score of 1 was assigned if the juvenile arrests were greater than 5% of the juvenile population.

Finally, socioeconomic and demographic characteristics that distinguished the county from the state averages and rankings relative to the other counties was examined. First, relative rankings were assigned for each indicator. If the county was in the top 2 or 3 rankings relative to the other counties, and if the county had higher or lower rates compared to the state averages or overall state rates (see Table 5), then the specific county indicator was noted as a distinguishing characteristic for that county and highlighted in the last column in Table 6.

#### **Phase II Results**

Community Readiness Results. The majority of respondents, regardless of which county they were from, indicated the strengths of a Drug Court program would include the focus on treatment, better supervision and monitoring of offenders, and reduced recidivism. There were several counties that mentioned the Drug Court program would potentially have a major impact on juveniles and that a Drug Court program would benefit families in the community by keeping them intact. The two major barriers mentioned across most of the respondents included funding and community resistance. Strategies identified to address these barriers were grant funding, or additional funding of some type, and community education. Using the media and providing statistics regarding the success of the Drug Court program were specifically mentioned with regard to educating the community and key community leaders about the Drug Court program.

Table 4 summarizes the community readiness rating results. Over all of the 12 counties there were two counties where Judges indicated no interest in pursuing Phase II of the needs assessment. These counties received a rating of 1 and were in Stage 1 of the community readiness model.

There were two counties that received a rating of 2 and were classified into Stage 2 indicating there were disagreements among key community leaders with regard to support of a Drug Court program, strengths, benefits, and barriers to having a Drug Court program in their community, or strategies for overcoming barriers. Judges in these areas were supportive of a Drug Court program but were hesitant because of the barriers in their community to implementing and maintaining a Drug Court program. A barrier such as not having a close treatment facility is a major hindrance to overcome and would take considerably more effort and coordination.

Four counties received a rating of 3 and were classified into Stage 3, indicating there was support in that community, especially from the Judges, for a Drug Court program; however, responses across all representatives were not cohesive in the support, strengths, and barriers. Stage 3, according to the Community Readiness Model suggests that there is some recognition in the community that there is a problem and that Drug Court may be an alternative. This criteria was definitely met in these communities. However, there was some hesitation about whether a Drug Court program would work in their community and whether the barriers to having a Drug Court program in their community could be overcome. More education about the Drug Court program in general, including statistics about effectiveness and education about funding opportunities, is recommended to help move these counties to Stage 4, the preplanning stage.

There were four counties that received a rating of 4, or Stage 4, indicating there was awareness that there is a problem in their community and that a Drug Court program may be a viable option for addressing that problem. The respondents in these communities were cohesive in their support for a Drug Court program, the strengths and benefits, the barriers, and strategies for overcoming those barriers. The next step for these four communities will be to apply for a planning grant. The applying for a planning grant would move them into 5, or preparation, of the Community Readiness Model

Table 4. Community Readiness Rating Results

RATING	COUNTIES	TOTAL
1	Nelson, Simpson	2
2	Henderson, Hopkins	2
3	Barren, Livingston, Marshall, Perry	4
4	Christian, McCracken, Rockcastle, Russell	4

Community Resource Results. Ratings were assigned to each county based on the number of community resources that were available, the number of AA or NA meetings available, and the distance to Comprehensive Care from the courthouse. Counties with the greatest number of resources and substance abuse treatment available and in which the Comprehensive Care was located close to the courthouse were given a higher rating than those with limited resources and a great distance between the courthouse and Comprehensive Care (see Table 5).

Counties with high or excellent ratings included: Barren, Christian, and Perry. These counties seemed to have available resources, had a variety of different AA or NA meetings that were held in the community at the time of this data collection, and had a Comprehensive Care facility located close to the courthouse (less than 1 mile). Counties with adequate resources included: Henderson, Hopkins, McCracken, and Rockcastle. Henderson, Hopkins, and McCracken Counties all had a relatively adequate number of resources; however, the Comprehensive Care facility was located a relatively long distance from the courthouse (between 28 and 35 miles). Rockcastle County's Comprehensive Care was located in close proximity to the courthouse (1 mile), but the other relevant community resources for this county were limited. Counties with limited resources included: Livingston, Marshall, and Russell. These three counties had very few resources available and the Comprehensive Care facilities were located a relatively great distance (between 22 and 48 miles) from the courthouse. (See the upper part of Table 5 for community resource comparisons)

County demographic, economic, and social statistics. Ratings were assigned to each county based on the level of adult substance use (see the middle part of Table 5 for the relative rates of substance use). Counties that received a high rating for adult substance use included: Christian, Henderson, and Perry (see Table 6 for county ratings on substance use). Christian and Perry counties had high levels of alcohol (above 86.96% for lifetime use) and marijuana (above 28.05% for lifetime use) use. These two counties also had elevated use of other substances such as hallucinogens, cocaine/crack, heroin, and/or other opiates. Perry County had relatively average rates of alcohol (83.20% for lifetime use) and marijuana (25.64% for lifetime use) use. However, Perry County had the highest rate of cocaine/crack use during the past year (1.01%) and the highest rating of heroin and/or other opiates for lifetime use (6.67%).

Juvenile substance use was also rated (see the middle of Table 5 for relative rates of juvenile substance use and see Table 6 for county ratings). Hopkins, Livingston, Marshall, and McCracken counties all had high rates of juvenile substance use (above 38.62% for alcohol use and 14.62% for marijuana use).

Juvenile arrests were also rated. Christian, Henderson, Hopkins, and McCracken all had relatively higher juvenile arrest rates—juvenile arrest rates in the county were greater than 5% of the juvenile population (see the middle of Table 5 for relative rates of juvenile arrests and see Table 6 for county ratings).

Finally, demographic and socioeconomic indicators are presented for each county (see Appendix A) and summarized in the lower part of Table 5. Each county indicator was compared to the indicator state averages as well as to each of the other counties. The highlighted summary for this category is presented in Table 6. As Table 5 indicates, 7 of the 10 counties had more than 50% of their population classified as rural—with Perry, Rockcastle, and Russell Counties having the highest percent rural. In addition, Perry, Rockcastle, and Russell Counties had the top three highest percentages of housing units without transportation while Perry and Rockcastle Counties also had the highest percentages of housing units without telephones. Perry, Rockcastle, and Russell had the lowest median income rates whereas Henderson and McCracken had the highest. Perry, Rockcastle, and Russell also had the highest percent of population living below poverty level while Marshall and Henderson had the lowest. Unemployment rates were highest in Russell, Perry, and Livingston and lowest in Barren and Christian Counties. Education levels were lowest in Perry, Rockcastle, and Russell and highest in Christian, McCracken, and Henderson. The highest rates of Kentucky Transitional Assistance Program (K-TAP) recipients were in Marshall, Livingston, and Russell Counties. Highest numbers of births to young mothers were in Perry, Hopkins, Rockcastle, and Russell, while the highest rates of single parent households were in Christian, Henderson, and McCracken Counties. Perry, Rockcastle and Hopkins all had high percentages of adolescents and young children.

#### **Summary of Phase II Results**

As Table 6 indicates, of the two counties with a Community Readiness rating of 2 (Henderson and Hopkins Counties), both had adequate resources a Drug Court program could utilize. In both communities the Comprehensive Care facility was about 30 miles away. However, Henderson had 6 AA/NA meetings and 11 private and individual substance abuse counseling services close to the courthouse while Hopkins had 17 AA/NA meetings, 5 private and individual substance abuse counseling services close to the courthouse as well as 3 other services in the community that might be beneficial to the Drug Court program. In addition, Henderson County had relatively high rates of adult substance use while Hopkins County had relatively high rates of juvenile substance use. Both counties had relatively high juvenile arrest rates. Further, 38% of Henderson County was classified as rural; this county had a higher percent of K-TAP recipients, a higher percent of single parent households and a high median income level than some of the other counties and than the state. Fifty-eight percent of Hopkins County was rural. Hopkins County also had a higher unemployment rate than the other counties and than the state average. And, in addition to the high juvenile substance use estimates and the high juvenile arrests, the rate of births to mothers under 20 years old was high along with a higher percent of the population who were adolescents or were young children.

Of the four counties with a Community Readiness rating of 3 (Barren, Livingston, Marshall, and Perry Counties), Barren and Perry Counties both had excellent community resources. The Comprehensive Care facility was close to the courthouse (less than a mile) and they had between 7 and 10 AA/NA meetings in the community, 2 private and individual substance abuse counseling services and 3-6 other resources that could be utilized for Drug Court participants. Livingston and Marshall had more limited community resources. Marshall's nearest Comprehensive Care facility was about 22 miles from the courthouse and there were 3 AA/NA meetings currently in the community. There were no other services identified in Marshall County related to substance abuse counseling or other social services that a Drug Court program could utilize. Livingston's nearest Comprehensive Care facility was 48 miles away from the courthouse and no AA/NA meetings or other relevant services were identified in the community. In addition, Perry County had relatively higher adult substance use estimates compared with the other counties in this study while Livingston and Marshall had higher juvenile substance use rates. Further over 50% of all four of these counties were rural. Barren, Livingston, and Marshall Counties had more K-TAP recipients than the other counties in this study and Livingston, Marshall, and Perry Counties all had higher unemployment rates. Barren and Perry Counties both had fewer residents who graduated from high school. Perry County also has a high number of residents without transportation and phones, lower median household income, more living below poverty level and more births to mothers younger than 20, and a higher percent of the population who are adolescents and young children.

Finally, of the four counties with Community Readiness ratings of 4 (Christian, McCracken, Rockcastle, and Russell Counties), Christian County had excellent community resources with the Comprehensive Care facility located within a mile of the courthouse, 14 AA/NA meetings, 10 private and individual substance abuse counseling services and 2 other services Drug Court clients could utilize. McCracken and Rockcastle both had more limited but probably adequate resources available. McCracken's local Comprehensive Care facility was about 28 miles from the courthouse; however, 12 AA/NA meetings, 15 private and individual substance abuse counseling services, and 6 other services were identified in the community. Rockcastle's Comprehensive Care facility, on the other hand, was located within 1 mile of the courthouse. However, only 1 AA/NA meeting, 1 private and individual substance abuse counseling service, and no other services were identified for

this community. Russell County had limited community resources with the Comprehensive Care facility located 38 miles from the courthouse and only 1 AA/NA meeting with no other services that were identified. McCracken County had relatively higher adult and juvenile substance use estimates, and higher juvenile arrests. Christian County also had higher juvenile arrests. McCracken and Russell Counties both had high percentages of K-TAP recipients. Christian and McCracken Counties both had higher percentages of single parent households. Rockcastle and Russell both had lower median household incomes, more living below poverty level, high unemployment rates, lower education levels, and more births to mothers under 20 years old. Rockcastle also had more people without transportation and phones, and more children and adolescents.

Table 6. Community Results

COUNTY	COMMUNITY READINESS RATING <sup>1</sup>	COMMUNITY RESOURCES <sup>2</sup>	ADULT SUBSTANCE USE <sup>3</sup>	JUVENILE SUBSTANCE USE <sup>3</sup>	JUVENILE ARRESTS <sup>4</sup>	OTHER INFORMATION
Barren	3	2	3	3	1	64% rural; more K-TAP recipients, and fewer residents have high school degree.
Christian	4	2	2	1	2	High percent of single parent households; higher education rates—more have high school degree and above.
Henderson	2	1	2	1	2	38% rural; slightly higher unemployment rate; higher percent of K-TAP recipients; high percent of single parent households (2 <sup>nd</sup> highest); and higher median income.
Hopkins	2	1	1	2	2	58% rural; slightly higher unemployment rate; more births to mothers under 20; and high percent of population 10-19 years old.
Livingston	3	0	1	2	1	100% rural; high unemployment rate, more K-TAP recipients, and less single parent households.
Marshall	3	0	1	2	1	76% rural; high unemployment rate; and high percent of K-TAP recipients.
McCracken	4	1	1	2	2	High percent of K-TAP recipients and high percent of single parent households.
Perry	3	2	2	1	1	82% rural; more people without transportation and phones, lower median household income, more living below poverty level; high unemployment rate; fewer residents have high school degree; more births to mothers under 20 years old; and more children and adolescents.
Rockcastle	4	1	1	1	1	82% rural; more people without transportation and phones, lower median household income, more living below poverty level; high unemployment rate; fewer residents have high school degree; more births to mothers under 20 years old; and more children and adolescents.
Russell	4	0	1	1	1	100% rural; lower median household income, more living below poverty level; highest unemployment rate; fewer residents have high school degree; large percent K-TAP recipients; and more births to mothers under 20 years old.

# Conclusions

Based on the results of this study, Christian, McCracken, and Rockcastle County representatives were supportive of having a Drug Court program in their communities and had adequate community resources necessary to support a Drug Court program. Christian and McCracken Counties both had relatively high juvenile arrests suggesting a juvenile Drug Court program may be valuable in these counties as well. Russell County representatives were also enthusiastic about having a Drug Court program in their communities. However, community resources in Russell County were more limited. Russell and McCracken Counties may want to consider either an in-house treatment model, using a private substance abuse service, or providing for transportation to substance abuse treatment. Rockcastle was 82% rural and Russell was 100% rural, which may suggest that a Drug Court program in these areas will need to be creative in meeting the needs of their target population. In other words, a Drug Court program in an urban area may be different than a Drug Court program in rural areas. There are fewer treatment programs in rural areas, which provide fewer examples of programs or "lessons to learn from." Also, both Rockcastle and Russell Counties had social indicators that suggest the counties have has a high teen or young mother pregnancy rate, more adolescents and young children, low education levels, and few economic opportunities, suggesting a Drug Court program in these areas may need to be creative in meeting the needs of their target population. It is recommended that all four communities apply for a Drug Court planning grant to move into the next stage necessary for implementing a Drug Court program.

In general, Barren and Perry County respondents were supportive of the concept of Drug Court program in their community, but not overwhelmingly cohesive in their support and other responses regarding a Drug Court program. These two counties also had excellent community resources available that a Drug Court program could utilize. Livingston and Marshall County respondents were also supportive, but not cohesive in that support and other responses across representatives of the counties. Community resources for these two communities were limited and juvenile substance use estimates were relatively high. Livingston and Marshall County may also want to consider the alternatives for client substance abuse treatment. Perry County was also a very rural county with low levels of education, high poverty rates, and few economic opportunities. In addition, Perry County had extremely high rates of households with no phones or transportation. All of these social indicators suggest a Drug Court program in this area will need to be creative in meeting the needs of their target population. All four communities could utilize further information about Drug Courts and key community leader meetings in order to move these communities toward a planning grant application.

Henderson and Hopkins County respondents were somewhat supportive of a Drug Court program, however, not cohesive in that support. Both Counties had adequate community resources although the local Comprehensive Care facilities were approximately 30 miles from the courthouse in both counties, which precludes easily accessible substance abuse treatment. Both counties had relatively higher juvenile arrests and Hopkins County had relatively higher juvenile substance use rates indicating a juvenile Drug Court program may also benefit these communities. Extensive information and key community leader meetings are recommended for preparing these counties for a Drug Court Program.

In summary, of 107 counties, 12 were identified for further assessment. Of the 12 identified for further assessment four communities were ready to move toward an implementation of a Drug Court program by applying for a planning grant (Christian, McCracken, Rockcastle, and Russell). Four were close to being ready to applying for a planning grant, but need further information regarding Drug Court programs (Barren, Perry, Livingston, and Marshall). Two counties could utilize extensive information about a Drug Court program but had Judges that were supportive of the idea (Henderson and Hopkins). About half of the counties in each category had adequate community resources and half had more limited resources indicating that some of the counties may want to consider alternative treatment models. Three of the counties were very rural and had social indicators suggesting low education levels and few economic opportunities. Programs in these areas may need to be creative in meeting the needs of their clients. Several counties had indicators including higher juvenile substance use rates, higher juvenile arrests, more births to teen and very young mothers, and more adolescents in the community, which suggested a juvenile Drug Court program may benefit the community. Finally, two counties were not able to consider a Drug Court program at the time of this study (Nelson and Simpson).

This needs assessment provides a data driven procedure for determining counties to target resources for implementing a Drug Court program. Phase I allowed for the identification of counties to target community readiness and resource assessment. Phase II of the assessment allowed for an in-depth analysis that incorporated both secondary data analysis as well as interviews with key community leaders. Limitations of this report include a selected sample and limited number of county interviews. If all of the key county leaders had participated in the surveys or representatives had been truly randomly selected, results may have been different. In addition, the secondary data collection conducted may not necessarily be representative of the variables and/or the county organizations needed to implement and maintain a Drug Court. These variables were selected and agreed upon by the research team as well as the Drug Court staff and appear to be appropriate. Regardless, this needs assessment yielded important and useful information for pursuing additional Drug Court programs.

# Appendix A County Results

#### Community Readiness Rating: 3

#### Barren

#### **Summary of Survey Results**

Representatives from Barren County were interviewed by telephone in April and May 1999 (n=9). All of the representatives interviewed, including Judges (n=2), law enforcement officials (n=4), defense attorneys (n=1) and prosecuting attorneys (n=2), indicated they were at least somewhat supportive of a Drug Court program. Most of the representatives agreed the biggest benefits of a Drug Court program would include: (1) Individualized treatment; (2) Better supervision; and (3) Reduced caseload. Respondents also believed that providing treatment for the defendants would be more beneficial than simply incarcerating them. Representatives agreed the two biggest barriers to a Drug Court program in their community would be community resistance and funding. These barriers could be overcome by education and funding for additional staff. In addition, Barren County has a wide variety of community resources a Drug Court program could utilize. The Circuit courthouse is located in Glasgow, which is within a one-mile radius of the Comprehensive Care center, the jail, and the health department.

Overall this County received a rating of 2 indicating that representatives were supportive of a Drug Court program but not overwhelmingly cohesive in that support, the strengths of a Drug Court program, the perceived barriers of a Drug Court program, or ways to overcome those barriers. The Judges for this County indicated their offices would be very supportive of a Drug Court program. Recommendations for this County would include building on the initial foundation of support among key leaders by meetings, education, and collaboration. In addition, promoting the Drug Court program concept among key community agencies may help to facilitate collaborations for community resources.

*Judge Survey.* Judges from Barren County believed that the greatest strengths of a Drug Court program would be:

- Individualized treatment;
- Devoted personnel to focus on clients;
- Better follow up; and,
- Provide more judicial time for other cases.

The Judges believed their office would be very supportive of a Drug Court program. The biggest barriers mentioned by the Judges were: Time; Money; and Getting offenders to participate. Appropriation of funds and experience were recommended to overcome the barriers.

Other Key Community Leader Surveys. Law enforcement officials indicated their offices would be somewhat supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Help for those involved with

drugs; (2) Better supervision; (3) Reduce jail crowding; (4) Deter and prevent drug use and repeat offenders; (5) Educating others about drug use; and, (6) Reducing caseload and saving money.

The largest barriers to a Drug Court program, according to law enforcement officials were: (1) Community acceptance; (2) Time; (3) Funding; (4) Getting the family involved; and (5) Professional inmates would manipulate the program to gain freedom. Appropriate funding and more staff were recommended to overcome these barriers.

Both defense attorney representatives and prosecuting attorney representatives indicated their offices would be supportive of a Drug Court program. They also indicated they believed Drug Court is a strong deterrent and that the treatment component and the reduction in recidivism would be benefits. The representatives also agreed the barriers would include community resistance and funding. Respondents indicated education would be important in overcoming the barriers.

#### Community Resources

Barren County Circuit and District courthouses are located in Glasgow, Kentucky. Glasgow has a number of excellent community resources a Drug Court program could potentially use. Specifically, there are approximately seven AA/NA meeting held throughout the week, a battered women's hotline, vocational/employment services, several private and insurance pay counseling services, a juvenile group home, and other community services (e.g., YMCA). In addition, Lifeskills Comprehensive Care, the jail, the health department, and the courthouse are all located with in a one-mile radius. See the resource list below.

Table 7. Barren County Community Resource Summary Table

#### **County Characteristics**

Table 8 below describes Barren County demographic, economic, and social characteristics. As Table 9 indicates, 86% of the adults and 41% of the juveniles in Barren County reported lifetime alcohol use with one-third of the adults and 13% of the juveniles reporting alcohol use in the month preceding the interview. One in 4 adults and 12% of juveniles report ever having used marijuana and about 7% of adults and 1% of juveniles report LSD and crack/cocaine use in their lifetime. There were 739 adult drug arrests in Barren County in Fiscal Year 1998. Juvenile arrests for 1996 are reported in Table 10. Overall, juvenile arrests in Barren County are low. The largest arrest categories for juveniles were DUI and liquor law violations.

## **Christian County**

#### **Summary of Survey Results**

Nineteen representatives from Christian County were interviewed by telephone from March through May 1999. All of the representatives interviewed including Judges (n=4), law enforcement officials (n=9), defense attorneys (n=3) and prosecuting attorneys (n=3) indicated they were at least somewhat supportive of a Drug Court program. Most of the representatives agreed the biggest benefits of a Drug Court program would include: (1) Reduced crime; (2) Addressing drug use; (3) Giving juveniles an alternative to incarceration; and, (4) Saving the state and community money. Representatives agreed the two biggest barriers to a Drug Court program in their community would be community resistance and funding. These barriers could be overcome by education through the media, meetings, and additional funding for the program. In addition, Christian County has a wide variety of community resources a Drug Court program could utilize. The Circuit courthouse is located in Hopkinsville, which is within a one-mile radius of the Comprehensive Care Center, the jail, and the health department.

Overall this County received a rating of 3 indicating that representatives were supportive of a Drug Court program and fairly cohesive in that support, the strengths of a Drug Court program, the perceived barriers of a Drug Court program, and ways to overcome those barriers. The majority of the representatives were concerned about community acceptance of the Drug Court program indicating that using the media and community meetings may facilitate the program acceptance and implementation.

*Judge Survey.* Judges from Christian County believed that the greatest strengths of a Drug Court program would be:

- Reduce recidivism and drug related crime;
- Education and treatment for drug abusers;
- Focus on young drug offenders;
- Provide more judicial time for other cases; and,
- Additional option for the court in handling drug users.

The Judges believed their office would be very supportive of a Drug Court program. The biggest barriers mentioned by the Judges were: Community resistance; Cooperation among key community members; Time; and, Belief that drug use foster violence whether individuals are violent or not. Using public forums and education sessions with civic organizations and law enforcement; showing success of other Drug Court programs; reorganizing court procedures to accommodate Drug Court requirements; funding, and education through the media were recommended to overcome the barriers.

Other Key Community Leader Surveys. Law enforcement officials indicated their offices would be somewhat supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Assisting probation caseload and saving jail space; (2) Better supervision; (3) Reduced recidivism; (4) Deter and prevent drug use and repeat offenders; (5) Educating others about drug use; (6) Community awareness; (7) Less placement of kids into Juvenile facilities; (8) Provides another option for offenders; (9) Stress treatment and rehabilitation rather than punishment; and, (10) Reducing caseload and saving money.

The largest barriers to a Drug Court program, according to law enforcement officials were: (1) Personnel; (2) Cooperation of key community members; (3) Funding; (4) Community support; and (5) Lack of community and clinical resources. The following strategies were recommended to overcome barriers:

- Show statistics and case histories to support success of the Drug Court program;
- Educate the public;
- Promote cooperation among key community members;
- Funding; and,
- More private counselors;

Both defense attorney representatives and prosecuting attorney representatives indicated their offices would be supportive of a Drug Court program. They also indicated they believed Drug Court would provide intensive supervision and rehabilitation and would be a more realistic alternative to addressing problems related to drug use. The representatives also agreed the barriers would include community resistance and funding. Respondents indicated education, grant funding, and showcasing prior Drug Court successes and reduced crime would be important in overcoming the barriers.

#### Community Resources.

The Circuit and District courthouses are located in Hopkinsville, Kentucky. Further, Hopkinsville has a number of excellent community resources a Drug Court program could potentially use. Specifically, there are approximately fourteen AA/NA meeting held throughout the week, a battered women's hotline, vocational and employment services, ten private and insurance pay counseling services, and other community services (e.g., Salvation Army). In addition, Pennyroyal Comprehensive Care, the jail, the health department, and the Circuit court house are all located with in a one-mile radius. See the resource list below.

#### County Characteristics.

Table 12 below describes Christian County demographic, economic, and social characteristics. As Table 13 indicates, 89% of the adults and 39% of the juveniles in Christian County reported lifetime alcohol use with over one-third of the adults and 10% of the juveniles reporting alcohol use in the month preceding the interview. One in 3 adults and 15% of juveniles report ever having used marijuana. Further, about 10% of adults and 2% of juveniles report ever having used LSD and 8% of adults and 1% of juveniles report lifetime crack/cocaine use. There were 1,195 adult drug arrests in Christian County in Fiscal Year 1998. Juvenile arrests are reported in Table 14. There were 284 juvenile arrests in 1996, which is about 5% of the juvenile population. The largest arrest categories for juveniles were: larceny, other assault, burglary, drugs, disorderly conduct, and fencing.

#### Henderson

#### Summary of Survey Results

Representatives from Henderson County were interviewed by telephone from March through June 1999 (n=17). Judge representatives (n=3), law enforcement officials (n=7), and defense attorney representatives (n=4) were supportive of a Drug Court program. Prosecuting attorney representatives (n=3), however, did not indicate being very supportive of a Drug Court program in Henderson County. Most of the representatives agreed the biggest benefits of a Drug Court program would be: Focus on treatment; Better supervision of clients; Better for families; Reduced caseload; and Save the state and community money. Representatives agreed the biggest barriers to a Drug Court program in their community would include community resistance, judicial resistance, sincerity of participants, and funding. These barriers could be overcome by education, funding, and devising a fair program. In addition, Henderson County has a number of community resources a Drug Court program could utilize.

Overall this County received a rating of 1 indicating that representatives were supportive of a Drug Court program but not overwhelmingly cohesive in that support, the strengths of a Drug Court program, the perceived barriers of a Drug Court program, or ways to overcome those barriers. Judges were supportive, on average, of a Drug Court program; however, they listed several barriers to having a Drug Court program in their community but had no ideas about how to overcome those barriers. Recommendations for this County would include building on the initial foundation of support among key leaders through meetings, education, and collaboration starting with the Judges in the County as a first critical step. In addition, promoting the Drug Court program concept among key community agencies may help to facilitate collaborations for community resources.

*Judge Survey.* Judges from Henderson County believed that the greatest strengths of a Drug Court program would be:

- Reduce recidivism:
- Save money and jail space;
- Reduce crime:
- Help juveniles by keeping them out of the revolving door;
- Provide systematic enforcement; and,
- Treatment.

The Judges believed their office would be supportive of a Drug Court program. The biggest barriers mentioned by the Judges were: (1) Time; (2) Money; (3) Support of key community leaders and judicial officials; and (4) There may be some who enter the Drug Court who committed a heinous crime. Nothing was mentioned to overcome these barriers.

Other Key Community Leader Surveys. Law enforcement officials indicated their offices would be supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Individualized help for those involved with drugs; (2) Better supervision; (3) Reduce jail crowding; (4) Deter and prevent drug use and repeat offenders; (5) Educating others about drug use; (6) Involvement of the family and the court; (7) Drug Court is more effective than other programs; and, (7) Reducing caseload and saving money.

Law enforcement officials also indicated they believed the biggest benefits to their office would by: (1) More free time; (2) Reduce paper work; (3) Lower crime rates and reduction in repeat offending; (4) Better monitoring system; and, (5) Opportunity to deal with more serious offenders.

The largest barriers to a Drug Court program, according to law enforcement officials were: (1) Community acceptance; (2) Judge time; (3) Funding; (4) Getting the family involved; (5) Too many supervisors for the individual; (6) Limited number of clients would be served; (7) Community resistance; (8) Sincerity of participants; (9) Devising a fair system; and, (10) Education about the program.

Defense attorney representatives indicated their offices would be very supportive of a Drug Court program. They also indicated they believed Drug Court is an important alternative to putting drug users into prison which would be less disruptive to families and would reduce the jail/prison population. Defense attorney representatives also thought that rehabilitation and treatment is useful and cost effective. They believed the biggest barriers would be funding, key community leader resistance, and community resistance. A strong public relations campaign regarding the Drug Court program was recommended for overcoming barriers.

Prosecuting attorney representatives were the least supportive of having a Drug Court program in their community. Prosecutors also reported they believe that Drug Court would: (1) Play a greater role in rehabilitation; (2) Would enhance a family situation; (3) Drug Court is a treatment program; (4) Would free up court time and space to handle violent criminals; (5) Alternative to jail; (6) Reduce crime and help people to become productive citizens; and, (7) Lower the cost of incarceration. The representatives also agreed the barriers would include community resistance and funding. Respondents indicated education would be important in overcoming the barriers.

## **Community Resources**

The Circuit courthouse in Henderson County is located in Henderson, Kentucky and has a number of excellent community resources a Drug Court program could potentially use. Specifically, there are approximately six AA/NA meetings held throughout the week, a number of private and public counseling services, and vocational/employment services. In addition, River Valley Comprehensive Care is 30 miles away from the courthouse. The jail, the health department, and the courthouse are all located with in a four-mile radius. See the resource list below.

Table 15. Henderson County Community Resource Summary Table

#### County Characteristics.

Table 16 below describes Henderson County demographic, economic, and social characteristics. As Table 17 indicates, 87% of the adults and 41% of the juveniles in Henderson County reported lifetime alcohol use with 33% of the adults and 10% of the juveniles reporting alcohol use in the month preceding the interview. Twenty-eight percent of adults and 12% of juveniles report ever having used marijuana. Further, about 8% of adults and 1% of juveniles report ever having used LSD and 7% of adults and 1% of juveniles report lifetime crack/cocaine use. There were 978 adult drug arrests in Henderson County in Fiscal Year 1998. Juvenile arrests are reported in Table 18. There were about 679 juvenile arrests in 1996, which is about 18% of the juvenile population. The largest arrest categories for juveniles were: larceny, other assault, and disorderly conduct.

#### Hopkins

#### **Summary of Survey Results**

Fourteen representatives from Hopkins County were interviewed by telephone from March through June 1999. All of the representatives interviewed including Judges (n=3), law enforcement officials (n=7), defense attorneys (n=3) and prosecuting attorneys (n=1) indicated they were at least somewhat supportive of a Drug Court program.

Most of the representatives agreed the biggest benefits of a Drug Court program would include helping individuals who were addicted, reducing recidivism, offers an alternative to prison, and educating the community about drug use. Representatives agreed the biggest barriers to a Drug Court program in their community would be community resistance, key community leader resistance, and funding. These barriers could be overcome by education, judicial conferences, and funding. An appropriate treatment facility was also a major concern mentioned by respondents. Hopkins County does have a number of community resources a Drug Court program could utilize.

Overall this County received a rating of 1 indicating that representatives were supportive of a Drug Court program but not overwhelmingly cohesive in that support, the strengths of a Drug Court program, the perceived barriers of a Drug Court program, or ways to overcome those barriers. Judges were supportive of a Drug Court program. A major concern was a treatment facility. Recommendations for this County would include building on the initial foundation of support among key leaders by meetings, education, and collaboration starting with the Judges in the County would be a first critical step. In addition, promoting the Drug Court program concept among key community agencies may help to facilitate collaborations for community resources. Addressing the treatment issue and alternatives will be critical for gaining support for a Drug Court program as well.

*Judge Survey.* Judges from Hopkins County believed that the greatest strengths of a Drug Court program would be:

- A better way to target treatment and punishment for offenders;
- Better monitoring of offenders;
- Helping addicts; and,
- Offer an alternative to prison.

The Judges believed their office would be supportive of a Drug Court program. The biggest barriers mentioned by the Judges were: Personnel; Funding; No inpatient treatment program; and Community support. Funding, hiring more personnel, and creating an inpatient treatment program were all suggested to overcome these barriers.

Other Key Community Leader Surveys. Law enforcement officials, on average, indicated they were unsure about having a Drug Court program in their community. They indicated the following would be major benefits of a Drug Court program:

- Eliminating future users from getting into deeper problems;
- Helping people who need help;
- Educating the community and law enforcement officials about drug use;
- Reducing calls and expenses;
- Reducing repeat offending;
- Helping juveniles with drug problems;
- Reducing jail time;
- Allowing courts to focus on other problems;
- Reducing inmate population;
- Better monitoring of offenders;
- Getting cases before judiciary faster; and,
- Alternative to prison.

The largest barriers to a Drug Court program, according to law enforcement officials were: (1) Community acceptance; (2) Judge time; (3) Funding; (4) Personnel; (5) Facilities for Drug Court program location; (6) Lack of a treatment facility; and (7) Client base would be limited. The major suggestions for overcoming barriers included education, public relations for a Drug Court program, and funding.

Defense attorney representatives indicated their offices would be very supportive of a Drug Court program. They also indicated they believed strengths and benefits of the Drug Court program would include pre-trial diversion, rehabilitation, education, less jail time, reducing recidivism, and saving time and money. They believed the biggest barriers would be funding and community resistance. Education and communication about the Drug Court program were recommended for overcoming these barriers.

Prosecuting attorney representatives reported they believed that: (1) Rehabilitation; (2) Drug testing; and, (3) Supervision of Offenders would all be benefits of the Drug Court program. The representatives also agreed the barrier to having a Drug Court program in their community would be key community leader support. Respondents indicated education and judicial conferences would be important in overcoming the barriers.

## Community Resources.

The District and Circuit courthouses are located in Madisonville, Kentucky. Madisonville has a number of community resources a Drug Court program could potentially use. Specifically, there are approximately seventeen AA/NA meetings held throughout the week, five private and public counseling services, and vocational/employment services. Pennyroyal Comprehensive Care Center is within approximately 35 miles of the courthouse. The jail, the health department, and the courthouse are all located with in a one-mile radius. See the resource list below.

#### County Characteristics.

Table 20 below describes Hopkins County demographic, economic, and social characteristics. As Table 21 indicates, 86% of the adults and 39% of the juveniles in Hopkins County reported lifetime alcohol use with 33% of the adults and 10% of the juveniles reporting alcohol use in the month preceding the interview. Twenty-seven percent of adults and 15% of juveniles report ever having used marijuana. There were 880 adult drug arrests in Hopkins County in Fiscal Year 1998. Juvenile arrests are reported in Table 22. There were 421 juvenile arrests in 1996, which is about 10% of the juvenile population. The largest arrest categories for juveniles were: larceny, vandalism, liquor law, and disorderly conduct.

#### Livingston

#### Summary of Survey Results

Representatives from Livingston County were interviewed by telephone from March through June 1999. Four representatives were interviewed for Livingston County, including one Judge, two law enforcement representatives, and one prosecutor. All of the representatives interviewed indicated they were supportive of a Drug Court program. Most of the representatives agreed the biggest benefits of a Drug Court program would include reduced crime, helping families stay together, and the focus on treatment. Representatives agreed the two biggest barriers to a Drug Court program in their community would be community resistance, no client participation, and funding. These barriers could be overcome by education and additional funding. In addition, Paducah is 40 miles from the Courthouse in Livingston County, which has a number of community resources a Drug Court program could utilize.

Overall this County received a rating of 2 indicating that representatives interviewed were supportive of a Drug Court program and cohesive in their survey responses regarding the Drug Court program. However, there was only one Judge and few key community leaders who were surveyed. Recommendations for this County would include building on the initial foundation of support among key leaders by meetings, education, and collaboration starting and with the Judges in the County would be a first critical step.

*Judge Survey*. The Judge that was interviewed indicated she would be very supportive of a Drug Court Program and that lower repeat offending; preventing serious jail time with juveniles; and a drug treatment program were all benefits of a Drug Court program. The biggest barriers included funding and community acceptance. Education and funding were recommended to overcome barriers.

Other Key Community Leader Surveys. Law enforcement officials indicated their offices would be supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Rehabilitation; (2) Lower crime; (3) Drug treatment; and (4) Helping families to stay together.

The largest barriers to a Drug Court program, according to law enforcement officials were: (1) Community resistance; and (2) No client participation. Education and making the program mandatory were mentioned as strategies to overcome the barriers.

Prosecuting attorney representatives reported they believe that benefits of a Drug Court program in their community would be: (1) Continuous monitoring and contact; (2) Random drug testing; (3) Lower repeat offending; and (4) Reduction in caseload. Time limitations were mentioned as the biggest barrier and cooperation with the Judges office and law enforcement were recommended to overcome that barrier.

## Community Resources

Smithland, where the Circuit Courthouse is located, has limited community resources. However, Paducah is 40 miles away and has numerous community resources.

#### Marshall

#### Summary of Survey Results

Two Judges were interviewed from Marshall County in April 1999. The Judges indicated they would be very supportive of a Drug Court program and that the strengths would include: Better monitoring and follow-up of offenders; Fewer people in jail; Less jail time for first time offenders; Treatment focus; and Getting family members involved. The biggest barriers were time, personnel, community resistance, and a desire to lump users and traffickers together. Education about the Drug Court program and funding were recommended to overcoming the barriers. Community resources were limited.

Overall this County received a rating of 2 indicating that the Judges were very supportive and cohesive in that support of a Drug Court program. However, responses from other key community leaders were not completed. Extensive preliminary education and communication is recommended to increase the likelihood of support for a Drug Court program in Marshall County.

#### **Community Resources**

Community resources are limited in Benton, Kentucky, which is where the Circuit Courthouse is located. The Health Department and jail are all located within a one-mile radius of the courthouse. However, Comprehensive Care is approximately 22 miles away from the courthouse.

## **County Characteristics**

Table 28 below describes Marshall County demographic, economic, and social characteristics. As Table 29 indicates, 86% of the adults and 45% of the juveniles in Marshall County reported lifetime alcohol use with 33% of the adults and 10% of the juveniles reporting alcohol use in the month preceding the interview. One in four adults and 15% of juveniles report ever having used marijuana. There were 978 adult drug arrests in Marshall County in Fiscal Year 1998. Juvenile arrests are reported in Table 30. There were 26 juvenile arrests in 1996.

#### McCracken County

## Summary of Survey Results

Representatives from McCracken County were interviewed by telephone in April and May 1999 (n=15). Two of the four Judges interviewed were very supportive of the Drug Court program. One Judge was not interested in exploring the feasibility of a Drug Court for McCracken County, due to the fact he will be leaving the District Court Judiciary in the coming year. The other Judge cited retirement at the end of the year as the reason for disinterest in the Drug Court program.

The majority of representatives interviewed including law enforcement officials (n=7), defense attorneys (n=2), and prosecuting attorneys (n=2) were somewhat interested in a Drug Court program for McCracken County. Most of the representatives agreed the biggest benefits of a Drug Court program would be rehabilitation of drug-addicted offenders and a reduction in crime. Respondents also believed that focusing on the specific problem of drug addiction and drug related offenses is a strength of the Drug Court program. Representatives agreed the two biggest barriers to a Drug Court program in their community would be community resistance and commitment of clients to program. These barriers could be overcome by educating the community about Drug Court and pointing out the benefits of rehabilitation to participants.

Overall this County received a rating of 3 indicating enthusiasm for a Drug Court program and cohesiveness in understanding the strengths of a Drug Court program, barriers to having a Drug Court program in their County, and ways to overcome those barriers.

*Judge Survey.* Judges from McCracken County believed that the greatest strengths of a Drug Court program would be:

- Lower recidivism;
- Specifically deals with problems of defendants;
- Specifically targets those with drug problems:
- Availability of counseling and monitoring; and,
- Better familiarity with defendant, one Judge will know the case.

Two of the Judges interviewed believed their office would be supportive of a Drug Court program. Also, the Judges indicated that the Drug Court program would help concentrate efforts to help young people.

The biggest barriers mentioned by the Judges were: Public acceptance and lack of understanding; Funding; Facilities and time to hold Drug Court; Burden on Clerk's office; Setting up the administration; and Identifying cases to be addressed. The ways that were recommended for overcoming these barriers were educating the public, hiring more staff in Clerk's office, and funding.

Other Key Community Leader Surveys. Law enforcement officials indicated, overall, their offices would be supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Alleviate overcrowding in jail; (2) Allow officers more time to focus on other crimes; (3) Reduce recidivism; (4) Help target potential drug problems; and, (5) Get therapy for people before they become addicted; and (6) The reduction of crime.

The largest barriers to a Drug Court program, according to law enforcement officials were: Community acceptance; Funding; Availability of affordable treatment; and Willingness of participants to commit to treatment. Education of participants and community on benefits and success of program; interagency cooperation; grants; and giving participants responsibility and discipline were recommended to overcome these barriers.

Both defense attorney representatives and prosecuting attorney representatives indicated their offices would be extremely supportive of a Drug Court program. They also indicated that better monitoring of individuals, the decriminalizing sentence, and the treatment component of the Drug Court program would be benefits. The representatives also agreed the barriers would include community resistance, adequate staffing, participant resistance to treatment, and scheduling conflicts in the Courts. Respondents indicated the ways to overcome those barriers included education of community and participants and funding.

#### **Community Resources**

The Circuit and District courts are located in Paducah, Kentucky. Paducah has a number of excellent community resources a Drug Court program could potentially use. Specifically, there are approximately twelve AA/NA meetings held throughout the week, Western Regional Mental Health, vocational/employment services, several private and insurance pay counseling services, and other community services. See the resource list below.

## **County Characteristics**

Table 32 describes McCracken County demographic, economic, and social characteristics. As Table 33 indicates, 86% of the adults and 45% of the juveniles in McCracken County reported lifetime alcohol use with 33% of the adults and 10% of the juveniles reporting alcohol use in the month preceding the interview. Twenty-six percent of adults and 15% of juveniles report ever having used marijuana. There were 1,286 adult drug arrests in McCracken County in Fiscal Year 1998. Juvenile arrests are reported in Table 34. There were about 510 juvenile arrests in 1996, which was about 10% of the juvenile population. The largest arrest categories for juveniles were larceny, drugs, disorderly conduct, and liquor law offenses.

## Community Readiness Rating: 1

## **Nelson County**

## Summary of Results

Interviews were conducted with Judges (n=2) in Nelson County in April 1999. In general, the Judges indicated they were not interested in having a Drug Court program in Nelson County. The Judges also indicated that there would be no benefit of a Drug Court program and that the biggest barriers to having a Drug Court program would be the duplication of resources and the expenditure of time. The only thing mentioned by the Judges, that could potentially overcome these barriers, would be more Judges in the County.

## Community Readiness Rating: 3

#### Perry

## Summary of Survey Results

Representatives from Perry County were interviewed by telephone from March through June 1999 (n=7). Judges representatives (n=2), law enforcement officials (n=3), and defense attorneys (n=1) were supportive of a Drug Court program. Prosecuting attorney representatives (n=1), however, were not sure about their support for a Drug Court program in Perry County. Most of the representatives agreed the biggest benefits of a Drug Court program would include: Treatment; Better supervision; and Reduced crime. Representatives agreed the barriers to a Drug Court program in their community would be community resistance, funding, and an effective program structure. These barriers could be overcome by education, a good screening program, and good personnel. In addition, Perry County has a number of community resources a Drug Court program could utilize.

Overall this County received a rating of 2, indicating that representatives were supportive of a Drug Court program but not overwhelmingly cohesive in that support, the strengths of a Drug Court program, the perceived barriers of a Drug Court program, or ways to overcome those barriers. Recommendations for this County would include building on the initial foundation of support among key leaders by meetings, education, and collaboration starting with the Judges in the County would be a first critical step. In addition, promoting the Drug Court program concept among key community agencies may help to facilitate collaborations for community resources.

*Judge Survey.* Judges from Perry County believed that the greatest strengths of a Drug Court program would be:

- Reduce recidivism:
- Rehabilitation;
- Reduce ancillary crime (shoplifting due to drug use); and,
- Consistent treatment.

The Judges believed their office would be somewhat supportive of a Drug Court program. The biggest barriers mentioned by the Judges were: Support of key community leaders; Acceptance by the community; Funding; and Effective program structure. Education, good screening program, good personnel were mentioned as strategies to overcome perceived barriers.

Other Key Community Leader Surveys. Law enforcement officials indicated their offices would be supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Individualized help for those involved with drugs; (2) Better supervision; and, (3) Deter and prevent drug use and repeat offenders.

The largest barriers to a Drug Court program, according to law enforcement officials were: (1) Community acceptance; and, (2) Offenders would not want to participate. Educating the community about the Drug Court program and incentives and individualized goals were recommended to overcome barriers.

Defense attorney representatives indicated their offices would be supportive of a Drug Court program. They also indicated they believed Drug Court would reduce repeat offenders which would in turn, reduce caseload. In addition, help for offenders, frequent drug testing, better supervision, and rehabilitation were all mentioned as strengths of a Drug Court program. Funding and time were mentioned as the biggest barriers and funding and holding Drug Court sessions with Judges every other week was mentioned to overcome these barriers.

Prosecuting attorney representatives were unsure about their support for a Drug Court program. They suggested a Drug Court program might cut down on cases in Circuit court. They also mentioned cost and personnel as the biggest barriers, with funding as the approach to overcome the barriers to a Drug Court program.

#### Community Resources

The Circuit courthouse in Perry County is located in Hazard, Kentucky, which has a number of excellent community resources that could be used for Drug Court clients. There are about 10 different AA/NA groups held throughout the week, several private counseling agencies, and other community resources such as the spouse abuse center and community action. The Health Department, Comprehensive Care Center, and jail are all located within a one-mile radius of the courthouse.

## Community Readiness Rating: 4

#### Rockcastle

## **Summary of Survey Results**

Representatives from Rockcastle County were interviewed by telephone from March through June 1999 (n=11). Judges representatives (n=2), law enforcement officials (n=5), defense attorneys representatives (n=3) were supportive of a Drug Court program. Prosecuting attorney representatives (n=2) were the least supportive regarding a Drug Court program in Rockcastle. Most of the representatives agreed the biggest benefits of a Drug Court program would include: treatment; individualized, hands on approach; and monitoring of offenders. Most respondents agreed that providing treatment for the defendants would be more beneficial than simply incarcerating them. Representatives agreed the two biggest barriers to a Drug Court program in their community would be community resistance and funding. These barriers could be overcome by education and funding for additional staff. In addition, Rockcastle County has some community resources a Drug Court program could utilize.

Overall this County received a rating of 3 indicating that representatives were supportive of a Drug Court program and cohesive in that support, the strengths of a Drug Court program, the perceived barriers of a Drug Court program, or ways to overcome those barriers. Recommendations for this County would include building on the initial foundation of support among key leaders, and expanding to include more community resources.

*Judge Survey.* Judges from Rockcastle County believed that the greatest strengths of a Drug Court program would be:

- Reduce recidivism;
- Hands on approach;
- Monitoring of offenders; and,
- Drug treatment.

The Judges believed their office would be somewhat supportive of a Drug Court program. The biggest barriers mentioned by the Judges were time and community resistance. Having a family court and educating the community were mentioned as strategies for overcoming the perceived barriers.

Other Key Community Leader Surveys. Law enforcement officials indicated their offices would be very supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Individualized help for those involved with drugs; (2) Better supervision; (3) Support system; (4) Deter and prevent drug use and repeat offenders; and (5) Reducing inmate population and caseload.

The largest barriers to a Drug Court program, according to law enforcement officials were: (1) Community acceptance; (2) Offender motivation to participate and complete participation; (3) Funding; and, (4) Community and key leader resistance. Grant funding and education about the program were recommended to overcome barriers.

Defense attorney representatives indicated their offices would be very supportive of a Drug Court program. They also indicated they believed Drug Court is an important alternative to putting drug users into prison and that Drug Court provides for better monitoring and treatment of offenders; reduces recidivism and caseload. Defense attorney representatives believed the biggest barriers would be key community leader resistance and community resistance in general. Education was recommended for overcoming this barrier.

Prosecuting attorney representatives were the least supportive of having a Drug Court program in their community. However, prosecutors reported they believe that Drug Court would: (1) Play a greater role in rehabilitation; (2) Increase individualized attention; (3) Reduce repeat offenders; and, (4) Reduce caseload. The representatives agreed the barriers would include community resistance and funding. Respondents indicated education and careful planning would be important in overcoming the barriers.

## **Community Resources**

The Circuit and District Courts are in Mount Vernon. Mount Vernon has some community resources that could be utilized for Drug Court clients. See the resource list below.

## **County Characteristics**

Table 40 below describes Rockcastle County demographic, economic, and social characteristics. As Table 41 indicates, 83% of the adults and 32% of the juveniles in Rockcastle County reported lifetime alcohol use with 23% of the adults and 7% of the juveniles reporting alcohol use in the month preceding the interview. One in four adults and 10% of juveniles report ever having used marijuana. There were 978 adult drug arrests in Rockcastle County in Fiscal Year 1998. Juvenile arrests are reported in Table 42. There were 19 juvenile arrests in 1996.

## Community Readiness Rating: 4

#### Russell

## Summary of Survey Results

Fourteen representatives from Russell County were interviewed by telephone in April and May 1999. Wayne County would also be incorporated into the Russell County Drug Court program if a Drug Court were established at the Circuit Court level. All of the representatives interviewed, including Judges (n=3), law enforcement officials (n=5), defense attorneys (n=4) and prosecuting attorneys (n=2) were overwhelmingly interested in a Drug Court program. Most of the representatives agreed the biggest benefits of a Drug Court program would be a reduction in crime. Respondents also believed that providing treatment for the defendants would be more beneficial than simply incarcerating them. Representatives agreed the two biggest barriers to a Drug Court program in their community would be community resistance and funding. These barriers could be overcome by education and funding, such as grant funding. Community resources, however, are problematic in that the courthouse and jail are located in Jamestown, which is relatively distant from community resources such as treatment facilities, AA/NA meetings, and other social services.

Overall this County received a rating of 3, indicating enthusiasm for a Drug Court program and cohesiveness in understanding the strengths of a Drug Court program, barriers to having a Drug Court program in their County, and ways to overcome those barriers. One barrier that was mentioned for this County is accessing an adequate treatment facility. The closest one is 45 miles away. This may require the County to hire its own treatment personnel and to use the Fayette Drug Court model as an example.

*Judge Survey.* Judges from Russell County believed that the greatest strengths of a Drug Court program would be:

- Lower recidivism:
- Alternative to incarceration;
- Helping people with drug problems;
- Educating the public;
- Supervision of the clients;
- Rehabilitation of younger defendants; and,
- Reducing drug cases.

All of the Judges interviewed believed their office would be supportive of a Drug Court program. Also, Judges indicated the community would be supportive and could contribute by providing employment opportunities to the younger defendants and by utilizing the churches and other community programs.

The biggest barriers mentioned by the Judges were: Public acceptance and lack of understanding; Adequate treatment facilities and urine testing facilities; and Cooperation from offenders and organizations. The Pulaski County treatment facility is 45 minutes

away. The two ways recommended to overcome these barriers were educating the public and funding.

Other Key Community Leader Surveys. Law enforcement officials indicated, overall, their offices would be supportive of a Drug Court program. They also indicated the major benefits of a Drug Court program would include: (1) Continued intervention and a longer-term plan of treatment; (2) Accountability; (3) Individualized attention; (4) Lower incarceration rates; and, (5) The reduction of crime.

The largest barriers to a Drug Court program, according to law enforcement officials were: Community acceptance; Funding; and Urine testing procedures. Education and grant money were recommended to overcome these barriers.

Both defense attorney representatives and prosecuting attorney representatives indicated their offices would be extremely supportive of a Drug Court program. They also indicated that client accountability and the treatment component of the Drug Court program would be beneficial. The representatives also agreed the barriers would include community resistance and funding. Respondents indicated the ways to overcome those barriers included education and funding. Defense attorney representatives believed that a barrier to a Drug Court program in their community would be client resistance to such a rigorous program, but that resistance could be overcome by making participation completely voluntary.

#### Community Resources

Russell County Circuit courthouse is located in Jamestown, where there are very limited resources. Also the Circuit courthouse is located 38 miles from the comprehensive care facility.

Table 43. Russell County Community Resource Summary Table

## **County Characteristics**

Table 44 below describes Russell County demographic, economic, and social characteristics. As Table 45 indicates, 83% of the adults and 37% of the juveniles in Russell County reported lifetime alcohol use with 22% of the adults and 10% of the juveniles reporting alcohol use in the month preceding the interview. About 23% of adults and 14% of juveniles report ever having used marijuana. There were 338 adult drug arrests in Russell County in Fiscal Year 1998. Juvenile arrests are reported in Table 46. There were 20 juvenile arrests in 1996.

## Community Readiness Rating: 1

## Simpson County

## Summary of Results

Interviews were conducted with Judges in Simpson County in May 1999. In general, the Judges (n=2) indicated they were not interested in having a Drug Court program in Simpson County. The Judges indicated the biggest barriers to having a Drug Court program would be lack of time, resources, and personnel. They also suggested that another Judge in the County would be necessary before potentially considering a Drug Court program.
